

Welcome at Waeslantnatie!

Waeslantnatie has been in existence for 20 years and fits in the age-old tradition of the nations that have made the port of Antwerp great: Tradition an Innovation.

Customized customer solutions

	<p>Charles Darwin:</p> <p><i>"It is not the fastest, the strongest or the smartest that survives, But... the most flexible"</i></p>
---	---

As a niche player, Waeslantnatie seeks individual solutions for specific customer problems: the business model is focussed on unloading cargo via inland shipping, train or truck and loading it into containers for export. We are fully responding to the new trends:

- Internet Auctions
- Low water levels in the summer that allow only small barges
- Short transhipment times due to container transports
- Wide range of goods where each package requires individual follow-up

Partnership

	<p>Johann Wolfgang Von Goethe:</p> <p><i>"Only in limitation does the master show himself and only rules and restrictions can give us freedom."</i></p>
--	---

Waeslantnatie wants to be a niche player that focuses on the new challenges and changing opportunities of the steel market.

- Fast an complete exchange of information due to constantly changing customer orders
- Cost-effective handling of orders despite the complexity

That is why Waeslantnatie limits its activities to unloading, storage and loading of goods. Other tasks are left to specialized third parties .

This concept offers many advantages:

- Waeslantnatie is not a competitor in the logistics chain.
- Waeslantnatie has low complexity in the organization and therefore low costs.

Strategie

Thanks to the internet, there are more and more traders at home and abroad. As a result, the market becomes more fragmented. We look for solutions “together” with the trades to bring goods to the customer as efficiently as possible via multi-modality.

One team op experienced Nation bosses

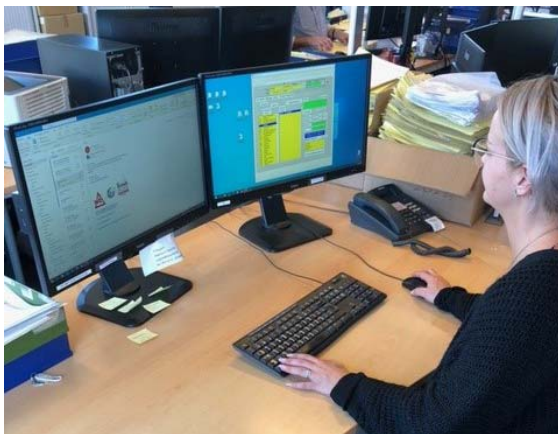

Machines challenge:

A nation boss is co-owner of the company. He or she is therefore extra motivated to provide our customers with the best service

Our nation bosses receive a thorough training that allows them to find and implement the best solutions. The work is therefore very varied and the most modern equipment is available to carry out the tasks.

IT knowledge is an asset:

Advanced IT ensures that all our partners are informed correctly and in good time. Simultaneous work ensures rapid processing of the assignments.

Flexible solutions for our partners:

We receive goods by rail and road.

Goods are increasingly shipped by water. Waeslantnatie has already succeeded in shipping 70% of the goods by water.

Leading means lookin ahead:

Climate plan:

Waeslantnatie did not wait for the energy crisis to surprise many companies.

In 2018, we have already started a climate plan. Every year we invest to limit CO2 emissinons:

- Installation of heat pumps in the offices
- Purchase of LNG trucks.
- Removal of all Asbestos in the buildings
- Installation of solar panels on the roof of our warehouses.

Our truck run with LNG. This means a reduction of CO2 emissions by 20% compared to diesel trucks.

We are confident that we will achieve the European 2030 climate targets.

Social responsibility:

Waeslantnatie respects the environment and pays attention to our youth.

We cooperated with the municipality of Beveren and the Kallo primary school to create an educational forest. Waeslantnatie donated the trees and the children were allowed to plant the trees themselves.

How do we do it?

Every year, the business magazine "TRENDS" draws up a list in which they compare the performance of the different companies in Belgium per province. The best companies are then nominated as TRENDSGAZELLE;

In addition to turnover growth, the evolution of the personnel and the evolution of important economic key figures are compared.

For the years 2021 and 2022 Waeslantnatie was nominated for the province of Antwerp in the medium-sized enterprises category!
